Qualification	Specialization	Institution & Place	Year of Passing	Board/University	Percentage (%)
• B.Tech	Computer Science General	Faculty of Engineering and Technology- Jain(Deemed-To-Be-University), Bengaluru	2021	FET, Jain Deemed-to-be University	70
12 <sup>th</sup> Std.		D.A.V. Rukmini Banarsi Kedia Secondary School, Birgunj, Nepal	2017	National Examination Board	65.7
10 <sup>th</sup> Std.		Southzone Secondary Boarding School, Birgunj, Nepal	2015	SLC	76.75

\*Percentage upto 5th Semester

### Internship Program:

**Genisup Pvt. Ltd, Hosur (Remote Intern)**

**From January 2020 – February 2020**

During this internship I had worked on Bulk SMS Sending Web Application. To design this application we had used Materialize CSS, Django and Twilio for API managements. This bulk SMS can be used in various platforms like mail, whatsapp and mobile SMS. In this I had worked as the team member for UI/UX.

## PythonMate, Indore (Remote intern)

From February 2020 – May 2020

During this internship I had worked on implementation of web scraping tool for discord. Here we had created the small chat bot in discord using python and later that tool had become the part of a bigger web scraping Saas. Moreover, I had worked on making the UI/UX for dashboard. It was designed using Bootstrap, javascript. I had worked there as the team and the project member.

Udemy: Online Courses
- Learn to Build Websites using Twitter Bootstrap  
Udemy: Online Courses
- AWS Fundamentals: Going Cloud-Native.  
Coursera, 2020
- AWS Fundamentals: Addressing Security Risk.  
Coursera, 2020
- Front-End Web Development with React.  
Coursera, 2020

## Skills:

- HTML, CSS
- Bootstrap
- AWS
- C
- Python
- Javascript (basic)
- React (basic)

## Projects & Activities:

---

- Hostel Management System

November, 2018

**“Hostel Management System”** this is the best way to apply for the outpass to go outside from the campus. In this application student can easily apply outpass at any time and in parallel warden is also having a different login credentials and dashboard to accept or reject the outpass. Once the warden accept the outpass the student will get a QR-Code which he can show on the gate to scan. On scanning the QR-Code the guard will get all the information about the student. While on reject outpass the student will not get any QR-Code. In this application we have used HTML CSS, BOOTSTRAP 4, JAVASCRIPT for frontend part and PYTHON FLASK, JSON for the backend services.

- Bulk SMS Sending Application

November, 2019

**Bulk SMS application** is a solution for sending bulk sms in any organisation for the sack of either information sharing or for promotions of any products. This application is used to send local sms, email and whatsapp sms individual as well as bulk. To design this we have used Materlise CSS for front-end and Django for backend development and Twilio API for sms services.

- SMART\_APPAREL

We have seen people working around the hours and this busy schedule they only happen to have a choice of choosing their apparels over the internet, but the drawback is the size of their products might not fit them. We are here with a solution, we call it "SMART APPARELS", having so less time from their busy schedule, they can use their hand gestures to change between products from their hats to their shoes. they can use this project while shopping and save a lot of time without actually changing dresses. We came up with this idea after looking at the real time issues of malls, online shopping and performing some surveys, technology that we propose to use is based on SPARK AR and simple camera and some specific scripts. Bringing this idea we intend to save the users/customers time, as being customer we know how precious time for customer is.

- Pinakin Solutions

February, 2020

A simple Website for consultancy business designed using HTML, CSS, Bootstrap and Javascript. And its live on the web browser  
[www.pinakinsols.com](http://www.pinakinsols.com)
